Hiring Manager Wood Dear Hiring Manager,

I am writing to express my interest in the Mechanical Engineer position at Wood. Over the past six years at Hatch, I have had the opportunity to work on large-scale mining, energy, and industrial projects as a mechanical engineer, commissioning engineer, package engineer, and software developer. I am excited by the opportunity to bring this combination of engineering and field experience to Wood and contribute to the delivery of complex projects around the world.

At Hatch, I worked on the BHP Jansen Potash Project as part of the commissioning team, coordinating system handovers, preparing subsystem test packages, managing notices of energization, and supporting successful project startup. Working alongside construction teams, contractors, and client representatives gave me firsthand experience with the challenges of executing large industrial projects safely and efficiently while maintaining tight project schedules.

My engineering experience also includes package engineering for lithium, copper, and refinery projects, where I worked closely with vendors and multidisciplinary teams throughout equipment selection, procurement, and project execution. In addition, I contributed to tunnel fire ventilation design and other mechanical engineering projects, allowing me to develop a broad understanding of industrial facilities across multiple sectors.

Alongside my mechanical engineering responsibilities, I have been fortunate to contribute to several industrial software initiatives. I co-developed VISTA, a real-time hydroelectric plant operating system written in C++ and C#, helping modernize legacy software used in plant operations. I also developed computer vision solutions using Python and PyTorch for mining applications and designed edge computing systems for industrial environments. These projects strengthened my ability to combine practical engineering with automation, data-driven decision making, and modern software tools.

Wood's reputation for delivering technically challenging projects across mining, energy, and industrial sectors is particularly appealing to me. I enjoy working in multidisciplinary teams, solving practical engineering problems, and spending time in the field where engineering decisions directly contribute to successful project execution. I believe my background aligns well with Wood's focus on delivering innovative and reliable engineering solutions for clients worldwide.

I am eager to continue developing my career by contributing to projects that demand strong technical skills, collaboration, and a commitment to safety and quality. My experience across engineering design, commissioning, project execution, and industrial software gives me a unique perspective that I believe would make me a valuable addition to the Wood team. Thank you for considering my application. I would welcome the opportunity to discuss how my experience and technical background can contribute to Wood's continued success. I look forward to the opportunity to speak with you.

Sincerely, **Nebojsa Jovanovic**
