

Cover Letter

Dear Hiring Manager,

I am writing to express my interest in the **Engineering Specialist** position at **Metrolinx**. As a Mechanical Engineer with over six years of experience delivering large-scale infrastructure and industrial projects at Hatch, I am excited by the opportunity to contribute to projects that improve transportation infrastructure across the Greater Toronto and Hamilton Area.

Throughout my career, I have worked in a variety of engineering roles, including **Commissioning Engineer**, **Package Engineer**, and **Software Developer**. This combination of experiences has given me a strong understanding of engineering design, project execution, commissioning, and the practical challenges involved in delivering complex infrastructure safely and efficiently.

At Hatch, I have supported major capital projects, including the **Jansen Potash Project**, where I coordinated system handovers, prepared commissioning documentation, optimized engineering workflows, and worked closely with contractors, owners, and multidisciplinary engineering teams to safely transition systems into operation. I have also contributed to lithium processing facilities, copper processing projects, and tunnel ventilation design, gaining experience across multiple project phases from design through commissioning.

Beyond traditional engineering responsibilities, I have developed software and automation tools that improved engineering workflows and project execution. I have built applications in C++, C#, and Python, developed computer vision systems for industrial environments, automated engineering documentation, and created tools that reduced manual effort while improving accuracy and efficiency. My software background complements my engineering experience by enabling me to identify opportunities for process improvement and develop practical technical solutions.

I am particularly interested in Metrolinx because of its commitment to delivering infrastructure that has a lasting impact on communities across Ontario. Large transportation projects require strong collaboration, careful planning, technical excellence, and disciplined execution—qualities that have been central to my work throughout my career. I enjoy working with multidisciplinary teams, solving complex engineering challenges, and supporting projects from planning through commissioning and operation.

My experience working both in the office and in the field has taught me the importance of communication, adaptability, and attention to detail. Whether coordinating commissioning activities, supporting project execution, or developing technical solutions that improve engineering processes, I take pride in delivering work that contributes to safe, reliable, and successful project outcomes.

I am confident that my combination of engineering experience, project execution knowledge, and technical problem-solving skills would allow me to make a meaningful contribution to Metrolinx. I would welcome the opportunity to contribute to projects that will shape the future of public transportation in Ontario while continuing to grow as an engineering professional.

Thank you for taking the time to consider my application. I appreciate your consideration and would welcome the opportunity to discuss how my experience and background align with the Engineering Specialist position. I look forward to hearing from you.

Sincerely, **Nebojsa Jovanovic**
