**Hiring Manager Stantec** Dear Hiring Manager,

I am writing to express my interest in the Mechanical Engineer position at Stantec. With six years of experience at Hatch, I have had the opportunity to contribute to large-scale industrial, mining, and energy projects as a mechanical engineer, commissioning engineer, package engineer, and software developer. I am excited about the opportunity to bring this diverse experience to Stantec and contribute to projects that have a meaningful impact on communities and industry.

During my time at Hatch, I worked on the BHP Jansen Potash Project as part of the commissioning team, where I coordinated system handovers, prepared subsystem test packages, managed notices of energization, and worked closely with contractors and multidisciplinary teams to ensure successful project execution. This experience strengthened my ability to work in fast-paced field environments while maintaining a strong focus on safety, quality, and execution.

In addition to commissioning, I performed package engineering for lithium, copper, and refinery projects, collaborating with vendors, project teams, and clients throughout the engineering lifecycle. I also contributed to tunnel fire ventilation design and other mechanical engineering projects, giving me experience across multiple sectors and project phases.

Beyond traditional mechanical engineering, I have always enjoyed solving complex technical problems through software. At Hatch, I co-developed VISTA, a real-time hydroelectric plant operating system written in C++ and C#, modernizing legacy systems while improving maintainability and performance. I also developed computer vision solutions using Python and PyTorch to improve operational safety in mining environments and designed edge computing systems for industrial deployments. These experiences have strengthened my ability to bridge mechanical engineering with automation, controls, and digital technologies.

What attracts me most to Stantec is the opportunity to work on challenging multidisciplinary projects alongside talented professionals who are committed to delivering practical and innovative engineering solutions. Stantec's reputation for technical excellence, collaboration, and sustainable infrastructure aligns closely with the type of work I have enjoyed throughout my career.

I believe my combination of mechanical engineering expertise, field commissioning experience, industrial project execution, and software development gives me a unique perspective that would allow me to contribute effectively to your team from day one. I enjoy working directly with clients, contractors, and multidisciplinary teams to solve real engineering problems and deliver successful projects.

Thank you for considering my application. I would welcome the opportunity to discuss how my background and experience can contribute to Stantec's continued success. I look forward to speaking with you.

Sincerely, **Nebojsa Jovanovic**
