Dear Hiring Manager,

I am writing to express my interest in engineering opportunities with the Toronto Transit Commission (TTC). I am a Mechanical Engineer and Software Developer with over six years of experience at Hatch, where I have worked across large-scale industrial projects, commissioning, package engineering, automation, real-time systems, and applied software development.

I am particularly interested in bringing this combination of engineering and technical experience to an organization responsible for operating and expanding one of North America's largest public transit systems.

During my time at Hatch, I have gained extensive experience working on complex multidisciplinary projects from engineering through construction, commissioning, and handover. Most recently, I supported the Jansen Potash Project as a Handover Coordinator within the HBJV Commissioning team.

In this role, I worked directly with engineering, construction, project, and commissioning teams to coordinate system handover activities, prepare Handover Packages and Subsystem Test Packages, and manage Notices of Energization.

Working in a field-oriented commissioning environment strengthened my ability to coordinate across disciplines, resolve technical and documentation issues, and ensure systems were ready for the next stage of execution.

I have also developed a strong background in automation and software systems. I contributed to VISTA, a real-time hydroelectric plant operating and optimization system developed in C++ and C#, where I worked on data ingestion, performance analysis, legacy-system modernization, and integration with industrial automation systems.

I have additionally developed computer-vision and edge-computing systems for industrial applications, using technologies including Python, C++, PyTorch, Flask, Angular, and Linux.

These experiences have given me an appreciation for the intersection of physical infrastructure, control systems, software, data, and reliable real-time operations.

My mechanical engineering experience includes package engineering on Lithium and Copper processing projects as well as work involving industrial facilities and tunnel fire ventilation.

Across these projects, I have worked in multidisciplinary environments where safety, reliability, documentation, constructability, and coordination between engineering and field teams are critical.

What attracts me to the TTC is the opportunity to apply this experience to infrastructure that directly serves the Toronto community.

I would bring a practical engineering mindset, experience working in both office and field environments, and the ability to bridge traditional engineering with modern automation and software technologies.

I am comfortable working with complex systems, learning new technologies, coordinating with diverse stakeholders, and taking ownership of technical problems through to implementation.

I would welcome the opportunity to contribute my engineering, commissioning, automation, and systems experience to the TTC.

Thank you for considering my application. I look forward to the opportunity to discuss how my background could contribute to the TTC's engineering and infrastructure programs.

Sincerely, Nebojsa Jovanovic Toronto, ON nebojsajovanovic95@gmail.com +1 647-896-6495 LinkedIn GitHub
