Professional Summary

After a full ride scholarship from Hatch at UofT Engineering, I worked at Hatch as an Intermediate Mechanical Engineer. During this time I worked on site as a commissioning engineer, as a package engineer and as a software developer. Now looking for new opportunities to work on site and hone my skills.

Technical Skills

Engineering & Software: Systems design, automation, real-time data systems

Languages: C, C++, Python, Go, JavaScript, C#, Shell, SQL

Frameworks / Tools: Flask, Django, Aiohttp, Angular, PyTorch, CUDA

Tools & technologies: Linux, Docker, Podman, K8S, Nvim, Git, Azure DevOps

Databases: Postgresql, MongoDB, SQLite

Networking: HTTP, TCP/IP

Cloud: Azure ML, Azure DevOps

Core Competencies: Full-stack engineering, machine learning integration, control systems, edge devices

Professional Experience

Hatch Ltd. – *Mechanical Engineer / Software Developer / Commissioning engineer Toronto, ON | Jan 2020 – Present*

- Coordinated handover and managed systems on large scale potash project - Jansen
 - Co-developed **VISTA**, a real-time hydro energy plant operating system written in **C++ and C#**, integrating control logic with industrial automation systems.
 - Delivered a **computer vision solution** for **Onaping Depth Mine**, using **Python (Flask, PyTorch)** and **Angular** to enhance safety and operational efficiency.
 - Designed and deployed an **edge computing system** for field-level monitoring and ML model execution.
 - Collaborated with multidisciplinary teams to modernize legacy tools and automate data workflows.
 - Applied **Azure ML** and **Azure DevOps** to streamline experimentation, deployment, and monitoring processes.
 - Developed and tested personal software tools, including a **custom web framework** and **in-memory database** for R&D use.
 - Package engineering work on several Lithium and Copper processing projects - Lilac, Licycle, Manjar Maju Refinery, etc.
- **Tunnel Fire Ventilation Design on La Fontayne Tunnel and other.**

Projects

Jansen Commissioning - On site work as Handover coordinator within HBJV Commissioning team - prepared Handover Packages - prepared Subsystem Test Packages - Notices of Energization - Worked in optimizing flows in Document systems, like automatically generating NOE documents - Leveraged Systems Tools like Smart Plant Foundation, Smart Completion and Sharepoint to manage project documents, enable contractors and expedite execution **Energy Plant Optimization Tool - VISTA (Hatch)** – Implemented modules for data ingestion and performance analysis in C++ - Maintained legacy C++ engine and C# UI components - Worked as part of an Azure Devops driven team - Migrated Engine from old oracles container library to modern C++ standard library **Computer Vision Platform on Edge Device (Personal Project)** – Fully on-prem, scalable infrastructure for deploying YOLO-based computer vision applications on edge devices. Supports adding and managing RTSP cameras and querying detections so teams can build higher-level, business-logic-driven applications such as alerts, analytics, and operational dashboards. **Custom C++ Framework (Personal)** – Built an HTTP server and lightweight DB engine to understand systems-level architecture.

Computer Vision Mining Project (Hatch) – Deployed camera-based inspection and analysis tools powered by Yolo.

Education

Bachelor of Applied Science in Mechanical Engineering

Minor in Robotics and Mechatronics *University of Toronto, Toronto, ON (2020)* Full ride scholarship recipient from Hatch - Hatch Engineering Entrance scholarship

Interests

Large Project Execution, Site Work, Applied AI in industry, control systems, energy technologies, and embedded software.
