

Dear Hiring Manager,

I am excited to apply for the **Principal Design Engineer / Mechanical Lead – Mining & Metals Projects** position at Fluor. With a Bachelor of Applied Science in Mechanical Engineering from the University of Toronto and over five years of experience at Hatch supporting large-scale industrial and mining projects, I have developed strong expertise in mechanical engineering design, package engineering, commissioning, and multidisciplinary project execution.

During my time at Hatch, I have contributed to major mining and industrial developments, including the **Jansen Potash Project**, where I worked within the commissioning team supporting project handover and field execution. My responsibilities included preparing handover packages, developing subsystem test packages, coordinating turnover activities, supporting notices of energization, and working with contractors and engineering teams to ensure systems were ready for safe operation. This experience provided me with a practical understanding of how engineering design decisions impact construction, commissioning, and operational readiness.

In addition to my commissioning experience, I have supported mechanical package engineering activities across a variety of mineral processing projects, including lithium and copper developments. I have worked with multidisciplinary teams to develop engineering solutions, coordinate technical requirements, support vendor interactions, and deliver designs that meet project safety, quality, and schedule objectives.

A key strength I bring is the ability to combine traditional mechanical engineering expertise with modern digital engineering capabilities. Alongside my mechanical responsibilities, I have developed industrial software systems, real-time monitoring platforms, and data-driven tools to improve engineering workflows and operational performance. This experience allows me to approach complex engineering challenges with both practical field awareness and a strong understanding of automation and digital transformation opportunities.

I am particularly interested in Fluor because of its global reputation for delivering complex mining and metals projects and its commitment to technical excellence, safety, and successful project execution. I am excited by the opportunity to contribute as a Mechanical Lead by applying my experience in mining projects, mechanical systems, commissioning, and multidisciplinary collaboration while continuing to grow as an engineering leader.

Thank you for considering my application. I would appreciate the opportunity to discuss how my experience and technical background can contribute to Fluor's Mining & Metals team and support the successful delivery of future projects.

Sincerely,

Nebojsa Jovanovic
