Cover Letter — Mechanical Engineer

Nebojsa Jovanovic Toronto, ON nebojsajovanovic95@gmail.com +1 647-896-6495 LinkedIn GitHub

Dear Hiring Manager,
I am writing to apply for the **Mechanical Engineer** position at **Cando Energy**. As a Mechanical Engineer with experience at Hatch spanning large-scale industrial projects, commissioning, package engineering, and industrial software development, I bring a combination of hands-on project execution, engineering fundamentals, and systems-level problem solving that I believe would be valuable to your team.

During my time at Hatch, I have worked across major industrial projects in both engineering and site environments. Most recently, I supported the **Jansen potash project** as part of the HBJV Commissioning team, working on-site as a **Handover Coordinator**. In this role, I coordinated system handover activities and worked closely with engineering, construction, contractors, and commissioning personnel to prepare systems for commissioning and operations.

I prepared **Handover Packages, Subsystem Test Packages, and Notices of Energization**, while using tools such as SmartPlant Foundation, Smart Completions, and SharePoint to manage project information and deliverables. I also developed automation for repetitive documentation tasks, including automatic generation of Notice of Energization documentation.

This experience gave me a strong appreciation for the practical side of engineering: ensuring that designs, documentation, equipment, and field execution come together successfully on a live project. I particularly enjoy working at the interface between engineering and construction, identifying issues, coordinating across disciplines, and finding practical solutions that keep projects moving.

I have also contributed to **package engineering activities across lithium and copper processing projects**, including Lilac, Li-Cycle, and the Manjar Maju Refinery. In addition, I contributed to tunnel fire ventilation design for the La Fontayne Tunnel. These experiences have given me exposure to different industrial applications and strengthened my ability to work effectively within multidisciplinary engineering teams.

Alongside my mechanical engineering work, I have developed significant experience in **industrial software, automation, and real-time systems**. I have contributed to industrial control and energy-plant systems using C++ and C#, developed computer vision and edge-computing systems for mining applications, and built software tools to automate engineering and project-documentation workflows.

I see this combination of mechanical engineering and software experience as an advantage in modern industrial environments. I am comfortable working with physical equipment and engineering processes while also using automation, data, and software to improve how systems are designed, executed, commissioned, and operated.

I hold a **Bachelor of Applied Science in Mechanical Engineering from the University of Toronto**, with a minor in **Robotics and Mechatronics**, and was the recipient of the **Hatch Engineering Entrance Scholarship**. My experience at Hatch has also taught me to work effectively across office, field, engineering, construction, and commissioning environments.

I am particularly interested in the opportunity at Cando Energy because it would allow me to contribute directly to industrial and energy projects where strong mechanical engineering, practical execution, and multidisciplinary collaboration are essential. I would welcome the opportunity to bring my engineering, project execution, commissioning, and automation experience to your team.

Thank you for your consideration. I would appreciate the opportunity to discuss how my background and experience could contribute to Cando Energy.
Sincerely, Nebojsa Jovanovic
