Dear Hiring Manager,

I am writing to express my interest in engineering opportunities at HDR.

With a Bachelor of Applied Science in Mechanical Engineering from the University of Toronto, a minor in Robotics and Mechatronics, and over six years of experience at Hatch, I bring a combination of mechanical engineering, large-scale project execution, commissioning, industrial automation, and software development experience that I believe would be valuable to HDR's multidisciplinary teams.

During my time at Hatch, I worked across engineering, commissioning, and software development roles, including supporting the large-scale Jansen potash project as a Handover Coordinator within the HBJV Commissioning team.

In this role, I worked closely with engineering, construction, commissioning, contractors, and project stakeholders to coordinate system handover and prepare the documentation required to transition systems into commissioning and operations.

I prepared Handover Packages, Subsystem Test Packages, and Notices of Energization, while also improving project workflows through automation of repetitive documentation tasks.

This experience gave me a strong appreciation for the coordination, attention to detail, and practical problem-solving required to successfully execute complex projects in the field.

My experience also extends into industrial automation and software systems.

I contributed to VISTA, a real-time hydro energy plant operating and optimization system developed using C++ and C#, where I worked on data ingestion and performance-analysis modules while maintaining and modernizing legacy systems.

I have also developed computer vision and edge-computing solutions for mining applications, including deploying machine-learning systems in industrial environments.

These projects required me to bridge the gap between engineering requirements, software, physical equipment, data, and real-world operational constraints.

I particularly enjoy working on problems that cross traditional engineering disciplines.

My background in mechanical engineering, combined with experience in controls, real-time systems, industrial data, automation, and applied AI, allows me to approach engineering problems from both a physical systems and technology perspective.

At the same time, my commissioning experience has taught me the importance of practical execution, safety, documentation, communication, and collaboration in delivering projects successfully.

I am interested in bringing this combination of field experience and technical depth to HDR, particularly in roles involving project execution, commissioning, mechanical engineering, industrial automation, controls, or technology-enabled engineering solutions.

I would welcome the opportunity to contribute to HDR's projects while continuing to grow as a multidisciplinary engineer.

Thank you for considering my application.

I would appreciate the opportunity to discuss how my experience and background could contribute to HDR.

Sincerely,

Nebojsa Jovanovic
