Re: Mechanical Engineer — Job Reference 17548 Dear Hiring Manager,

I am writing to express my interest in the Mechanical Engineer position with Mott MacDonald's Built Environment team in Toronto. As a Mechanical Engineering graduate from the University of Toronto and a former Mechanical Engineer at Hatch, I bring experience in multidisciplinary engineering projects, package engineering, infrastructure, commissioning, and technical project delivery. I am particularly interested in the opportunity to contribute to Mott MacDonald's building services team while supporting sustainable engineering solutions and expanding my experience across the built environment.

During my time at Hatch, I contributed to engineering projects involving mineral processing, lithium and copper processing, energy systems, and infrastructure. My work included package engineering activities, contributions to tunnel fire ventilation design, and supporting project execution on the large-scale Jansen potash project. These experiences strengthened my ability to work across engineering disciplines, coordinate technical deliverables, manage project documentation, and collaborate with engineering, construction, and commissioning teams to support project objectives.

On the Jansen project, I worked as a Handover Coordinator within the HBJV commissioning team, preparing Handover Packages, Subsystem Test Packages, and Notices of Energization. This role required careful coordination of technical information, attention to detail, and communication with multiple stakeholders to support commissioning and operational readiness. I also developed automation for repetitive documentation tasks, demonstrating my initiative in improving workflows and delivering more consistent results.

In addition to my mechanical engineering background, I bring strong digital engineering and software development capabilities. My experience includes industrial control systems, real-time data processing, computer vision, and applied AI. I have contributed to a hydro energy plant operating and optimization system and developed automation tools to improve technical workflows. I believe this combination of engineering knowledge and digital problem-solving would allow me to contribute to Mott MacDonald's commitment to technical excellence, innovation, and sustainable project delivery.

I am particularly drawn to Mott MacDonald's collaborative approach and its focus on delivering infrastructure that benefits communities. I would welcome the opportunity to work alongside your multidisciplinary teams, contribute to project delivery, and continue developing my expertise in mechanical engineering within the built environment.

Thank you for considering my application. I would appreciate the opportunity to discuss how my engineering experience, technical versatility, and commitment to continuous improvement could contribute to Mott MacDonald's Toronto team.

Sincerely, **Nebojsa Jovanovic**
