Professional Summary

Mechanical Engineer with a Bachelor of Applied Science in Mechanical Engineering and experience at Hatch supporting multidisciplinary engineering projects, package engineering, industrial systems, commissioning, and project execution. Experienced in coordinating engineering deliverables, preparing technical documentation, supporting field activities, resolving technical problems, and collaborating with engineering, construction, and commissioning teams. Contributed to projects across mineral processing, lithium and copper processing, industrial automation, and tunnel fire ventilation. Academic exposure to cleanroom environments through university-level Micro-Electro-Mechanical Systems (MEMS) coursework and cleanroom training. Combines strong mechanical engineering fundamentals with practical project experience, technical problem-solving, and workflow automation to improve engineering execution and project delivery.

Technical Skills

- **Mechanical Engineering:** Mechanical Systems, Package Engineering, Systems Design, Engineering Documentation, Technical Problem-Solving, Design Coordination, Equipment and System Integration
- **Project Execution:** Commissioning Support, Systems Handover, Field Coordination, Technical Deliverables, Progress Tracking, Schedule Coordination, Multidisciplinary Collaboration
- **Engineering Standards & Safety:** Engineering Design Principles, Technical Requirements Interpretation, Systems Verification, Commissioning Documentation, Quality and Safety Awareness
- **Industrial & Process Engineering:** Mineral Processing, Lithium and Copper Processing, Industrial Systems, Tunnel Fire Ventilation, Energy Systems
- **Engineering Software & Tools:** SmartPlant Foundation, Smart Completions, SharePoint, CAD, Azure DevOps
- **Automation & Data Systems:** C++, C#, Python, SQL, Industrial Automation, Control Systems, Real-Time Data Systems, Workflow Automation
- **Cleanroom & Microfabrication Exposure:** University-level MEMS coursework, academic cleanroom training, introductory exposure to cleanroom procedures and controlled laboratory environments
- **Core Competencies:** Analytical Thinking, Technical Documentation, Problem-Solving, Attention to Detail, Initiative, Cross-Disciplinary Coordination, Continuous Improvement

Professional Experience

Hatch Ltd. – *Mechanical Engineer / Package Engineer / Commissioning and Systems Handover*

Toronto, ON | Jan 2020 – Jul 2026

- Contributed to multidisciplinary engineering projects across mineral processing, lithium and copper processing, energy systems, and industrial infrastructure.
- Supported package engineering activities for projects including Lilac, Li-Cycle, and Manjar Maju Refinery, coordinating technical information and deliverables within broader engineering project requirements.
- Worked on the large-scale Jansen potash project as a Handover Coordinator within the HBJV commissioning team, supporting the transition of completed systems into commissioning and operational readiness.
- Coordinated engineering, construction, and commissioning stakeholders to track system handover requirements, resolve documentation gaps, and support project execution.
- Prepared Handover Packages, Subsystem Test Packages, and Notices of Energization (NOEs) in support of commissioning, systems verification, and project handover.
- Reviewed and organized technical documentation and deliverables to support system readiness, traceability, and compliance with project requirements.
- Developed automation to generate NOE documentation and streamline repetitive engineering and project documentation workflows, improving consistency and reducing manual effort.
- Used SmartPlant Foundation, Smart Completions, and SharePoint to manage engineering and commissioning information and support coordination across project teams.
- Contributed to tunnel fire ventilation design for the La Fontayne Tunnel and other projects, gaining exposure to mechanical engineering design considerations for infrastructure applications.

- Collaborated with multidisciplinary teams to understand technical requirements, investigate issues, coordinate information, and support practical engineering solutions.
- Contributed to the development and improvement of industrial energy systems software, including a real-time hydro energy plant operating and optimization system, strengthening knowledge of system integration, performance analysis, and control systems.
- Applied structured problem-solving and analytical skills to modernize engineering tools, automate workflows, and improve the reliability of technical processes.
- Supported engineering and project objectives by balancing technical requirements, documentation quality, coordination needs, and execution schedules.

SELECTED PROJECTS

Jansen Potash Project — Commissioning and Systems Handover

Hatch / HBJV

- Worked within the HBJV commissioning team as a Handover Coordinator on a large-scale industrial project.
- Coordinated system handover activities and technical deliverables to support commissioning and operational readiness.
- Prepared Handover Packages, Subsystem Test Packages, and Notices of Energization.
- Collaborated with engineering, construction, and commissioning personnel to coordinate information and resolve documentation gaps.
- Automated repetitive documentation activities, including NOE document generation, to improve workflow efficiency and consistency.
- Used SmartPlant Foundation, Smart Completions, and SharePoint to manage project information and support field execution.

Package Engineering — Mineral Processing Projects

Hatch

- Contributed to package engineering activities for lithium and copper processing projects, including Lilac, Li-Cycle, and Manjar Maju Refinery.
- Supported engineering coordination and the organization of technical information and project deliverables.
- Worked within multidisciplinary engineering environments requiring alignment between technical requirements, project documentation, and execution needs.

La Fontayne Tunnel — Fire Ventilation Design

Hatch

- Contributed to tunnel fire ventilation design activities.
- Gained exposure to mechanical ventilation design considerations for infrastructure and fire-safety applications.
- Worked within an engineering project environment involving coordination of technical requirements and multidisciplinary design considerations.

VISTA — Energy Plant Optimization Tool

Hatch

- Contributed to a real-time hydro energy plant operating and optimization system.
- Implemented data-ingestion and performance-analysis functionality to support industrial system monitoring.
- Worked with control logic and industrial automation system interfaces.
- Collaborated with team members to maintain and modernize software supporting energy system operations.

Education

University of Toronto — Bachelor of Applied Science in Mechanical Engineering

Minor in Robotics and Mechatronics | Toronto, ON | 2020

- Hatch Engineering Entrance Scholarship — Full Ride Scholarship Recipient

- Completed university-level Micro-Electro-Mechanical Systems (MEMS) coursework, including cleanroom training.
- Developed foundational knowledge of mechanical engineering principles, mechatronics, systems integration, and technical problem-solving through undergraduate coursework.

Additional Technical Development

- **Harvard CS50:** Completed CS50x, CS50 Python, CS50 Web, and CS50 SQL.
- **edX:** Completed online coursework in Data Structures and Algorithms.
- **Boot.dev:** Completed programming coursework involving guided and independent projects.
- **Nand2Tetris:** Completed coursework covering computer architecture, machine language, compiler development, and operating-system fundamentals.

Interests

Mechanical Systems Design, Industrial Project Execution, Package Engineering, Commissioning, Cleanroom Technology, Micro-Electro-Mechanical Systems (MEMS), Fire Ventilation, Energy Technologies, Industrial Automation, and Multidisciplinary Engineering.
