Hiring Manager
Aecon Group Inc.

Re: Field Engineer Position

Dear Hiring Manager,

I am writing to express my interest in the Field Engineer position at Aecon. With a Mechanical Engineering degree from the University of Toronto, supported by the Hatch Engineering Entrance Scholarship, and over six years of experience at Hatch working across commissioning, package engineering, and industrial software development, I am excited about the opportunity to contribute to the successful delivery of complex infrastructure and industrial projects.

One of the most rewarding parts of my career has been working on site during the Jansen Potash Project as part of the commissioning team. As a Handover Coordinator, I worked closely with construction, commissioning, and client teams to prepare handover packages, coordinate subsystem testing, manage notices of energization, and ensure systems were ready for safe turnover. Working in a fast-paced project environment taught me the importance of communication, attention to detail, and maintaining progress while prioritizing safety.

Beyond commissioning, I have supported package engineering for several lithium, copper, and industrial processing projects and participated in tunnel fire ventilation design. These experiences have strengthened my understanding of multidisciplinary engineering projects and reinforced my interest in field execution, problem-solving, and collaboration between engineering, construction, and operations teams.

While my primary goal is to continue developing as a field engineer, my software development experience has become an additional strength. I have helped develop industrial control software, computer vision systems for mining operations, and engineering automation tools that improve workflows and reduce manual effort. This background allows me to bridge the gap between field operations and digital solutions, making it easier to identify opportunities to improve efficiency and project execution.

I am particularly interested in joining Aecon because of its leadership in delivering major infrastructure, industrial, and energy projects across Canada. I enjoy working where engineering decisions directly influence construction progress and where collaboration between disciplines is essential to project success. I would welcome the opportunity to contribute my commissioning experience, technical background, and commitment to safe, high-quality project execution as part of your team.

Thank you for your time and consideration. I would appreciate the opportunity to discuss how my background and experience align with the needs of Aecon. I look forward to hearing from you.

Sincerely, **Nebojsa Jovanovic**
