PROFESSIONAL SUMMARY

Mechanical Engineer specializing in industrial project execution, systems completion, commissioning coordination, and project handover. Former Intermediate Mechanical Engineer at Hatch and Handover Coordinator with the Hatch-Bantrel Joint Venture (HBJV) on the Jansen Potash Project.
Experienced in coordinating construction turnover and systems handover, preparing Handover Packages, Subsystem Test Packages, and Notices of Energization (NOEs), and managing engineering documentation and project deliverables using SmartPlant Foundation, Smart Completions, and SharePoint.
Combines practical experience in large-scale engineering and commissioning environments with software development and automation capabilities. Brings a unique ability to bridge engineering execution, project information management, and digital workflow improvement.

CORE COMPETENCIES

- Systems Completion and Handover Coordination
- Commissioning and Construction Turnover
- Mechanical Completion and Completion Documentation
- System and Subsystem Completion Workflows
- Handover Packages and Subsystem Test Packages
- Notices of Energization (NOEs)
- Engineering Document Control and Deliverables Management
- SmartPlant Foundation and Smart Completions
- SharePoint and Project Information Management
- Construction, Engineering and Commissioning Coordination
- Workflow Automation and Process Improvement
- Mechanical and Package Engineering
- Industrial Automation and Real-Time Systems

PROFESSIONAL EXPERIENCE

Hatch Ltd. — Mechanical Engineer / Software Developer

Toronto, ON | January 2020 – July 2026

Handover Coordinator — Hatch-Bantrel Joint Venture (HBJV)

Jansen Potash Project

- Worked within the HBJV commissioning team as a Handover Coordinator, supporting the transition of constructed systems into commissioning and ultimately operations.
- Coordinated system and subsystem handover activities and managed documentation and deliverables required to support commissioning execution.
- Prepared Handover Packages, Subsystem Test Packages, and Notices of Energization (NOEs).
- Coordinated information and deliverables across project, engineering, construction, and commissioning stakeholders.
- Used SmartPlant Foundation, Smart Completions, and SharePoint to manage project information, engineering documentation, and contractor deliverables.
- Supported construction turnover and commissioning workflows through the preparation, organization, review, and transfer of system documentation.
- Developed automation for repetitive documentation workflows, including automated generation of NOE documents.
- Identified opportunities to improve documentation processes and reduce repetitive administrative work through software automation.
- Followed up on outstanding documentation and deliverables with project stakeholders to support system handover readiness and minimize delays to commissioning activities.

Intermediate Mechanical Engineer / Software Developer

Hatch Ltd.

- Performed package engineering activities across lithium and copper processing projects, including Lilac, Li-Cycle, and Manjar Maju Refinery.
- Contributed to tunnel fire ventilation design for the La Fontayne Tunnel and other engineering projects.
- Co-developed VISTA, a real-time hydro energy plant operating and optimization system using C++ and C#.
- Implemented data ingestion and performance analysis modules while maintaining and modernizing legacy C++ engine and C# user-interface components.
- Modernized legacy C++ functionality by migrating from an older container library to the modern C++ standard library.
- Developed computer vision solutions for the Onaping Depth Mine project using Python, Flask, PyTorch, and Angular.
- Developed and deployed edge computing systems for field-level monitoring and execution of machine-learning models in industrial environments.
- Collaborated with multidisciplinary engineering and software development teams to modernize legacy systems, automate workflows, and improve industrial data-processing processes.
- Worked within Azure DevOps-driven development environments supporting software development, testing, and deployment.

SELECTED PROJECT EXPERIENCE

VISP — Computer Vision Platform on Edge Devices

Personal Project

- Designed and developed an on-premises platform for deploying computer vision applications on edge devices.
- Implemented RTSP camera management and querying of stored detection data.
- Integrated computer vision, networking, databases, and web services into a scalable deployment architecture.

TECHNICAL SKILLS

Systems Completion and Project Execution:
Systems Completion, Systems Handover, Commissioning Coordination, Construction Turnover, Mechanical Completion, Handover Documentation, Subsystem Test Packages, Notices of Energization, Project Documentation Management.
Engineering and Industrial Systems:
Mechanical Engineering, Package Engineering, Systems Design, Industrial Automation, Control Systems, Real-Time Data Systems, Edge Computing.
Project Tools and Platforms:
SmartPlant Foundation, Smart Completions, SharePoint, Azure DevOps, Git, Linux, Docker, Kubernetes.
Programming Languages:
C, C++, Python, Go, JavaScript, TypeScript, C#, Shell, SQL.
Frameworks and Technologies:
Flask, Django, Angular, PyTorch, CUDA, PostgreSQL, MongoDB, SQLite.

EDUCATION

University of Toronto

Bachelor of Applied Science (BASc), Mechanical Engineering
Minor in Robotics and Mechatronics | Toronto, ON | 2020

- Hatch Engineering Entrance Scholarship — Full-Ride Scholarship Recipient.

CONTINUOUS EDUCATION

- **Harvard CS50:** Completed CS50x, CS50 Python, CS50 Web, and CS50 SQL.
- **edX:** Data Structures and Algorithms.
- **Boot.dev:** Programming curriculum covering software development and computer science fundamentals.
- **Nand2Tetris:** Computer architecture, machine language, assembly, compiler development, and operating-system construction.

INTERESTS

Large-Scale Industrial Project Execution, Systems Completion, Commissioning, Construction Turnover, Digital Project Delivery, Industrial Automation, Applied AI, and Systems Engineering.
