PROFESSIONAL SUMMARY

Mechanical Engineer with experience supporting multidisciplinary engineering and project execution across large-scale industrial and process-sector projects. Former Intermediate Mechanical Engineer at Hatch and Handover Coordinator with the Hatch-Bantrel Joint Venture on the Jansen Potash Project.
Background includes package engineering, mechanical project work, construction turnover, systems completion, commissioning coordination, and engineering documentation. Experienced working with engineering, construction, and commissioning stakeholders to coordinate technical deliverables and support project execution and system readiness.
Also brings software development and industrial automation experience, including workflow automation, real-time industrial systems, and computer vision applications. Combines an engineering foundation with practical digital capabilities to improve engineering and project workflows.

CORE COMPETENCIES

- Mechanical Engineering and Package Engineering
- Industrial and Process-Sector Projects
- Multidisciplinary Engineering Coordination
- Engineering Deliverables and Documentation
- Systems Completion and Systems Handover
- Construction Turnover and Commissioning Coordination
- Mechanical Completion Documentation
- Handover Packages and Subsystem Test Packages
- Notices of Energization (NOEs)
- Contractor and Stakeholder Coordination
- Project Information Management
- Industrial Automation and Workflow Improvement

PROFESSIONAL EXPERIENCE

Hatch Ltd. — Mechanical Engineer / Software Developer

Toronto, ON | January 2020 – July 2026

Mechanical Engineering and Package Engineering

- Performed package engineering activities across lithium and copper processing projects, including Lilac, Li-Cycle, and Manjar Maju Refinery.
- Prepared and reviewed equipment specifications and datasheets to communicate technical and project requirements.
- Reviewed vendor drawings and technical documentation for alignment with engineering requirements.
- Evaluated vendor quotations and technical offers, supporting technical comparisons and equipment selection recommendations.
- Contributed to multidisciplinary engineering work for industrial and infrastructure projects, including tunnel fire ventilation design for the La Fontayne Tunnel.
- Collaborated with engineering teams across project disciplines to support technical work and project deliverables.
- Coordinated with vendors and multidisciplinary engineering teams to resolve technical comments and address equipment documentation requirements.
- Supported package engineering deliverables throughout the engineering review process, maintaining alignment between vendor submissions and project specifications.
- Coordinated technical interfaces between equipment packages, vendors, and multidisciplinary engineering teams to support equipment integration and project requirements.
- Reviewed engineering documentation and vendor submissions to identify technical discrepancies, track comments, and support resolution prior to project deliverable acceptance.

Handover Coordinator — Hatch-Bantrel Joint Venture (HBJV)

Jansen Potash Project

- Supported the HBJV commissioning team in transitioning constructed systems into commissioning and, ultimately, operations.
- Coordinated system and subsystem handover activities and the documentation required to support commissioning execution.
- Prepared Handover Packages, Subsystem Test Packages, and Notices of Energization (NOEs).
- Coordinated project information and deliverables across engineering, construction, project, and commissioning stakeholders.
- Used SmartPlant Foundation, Smart Completions, and SharePoint to manage engineering documentation, project information, and contractor deliverables.
- Supported construction turnover and commissioning workflows through the preparation, organization, review, and transfer of system documentation.
- Followed up on outstanding documentation and deliverables with project stakeholders to support handover readiness and minimize delays to commissioning activities.
- Developed automation for repetitive documentation workflows, including automated generation of NOE documents.

Industrial Software and Automation

- Co-developed VISTA, a real-time hydro energy plant operating and optimization system using C++ and C#.
- Implemented data ingestion and performance analysis modules and maintained and modernized legacy C++ engine and C# user-interface components.
- Developed computer vision solutions for the Onaping Depth Mine project using Python, Flask, PyTorch, and Angular.
- Developed and deployed edge-computing systems for field-level monitoring and execution of machine-learning models in industrial environments.
- Worked in Azure DevOps-based development environments supporting software development, testing, and deployment.

SELECTED TECHNICAL PROJECT

VISP — Computer Vision Platform on Edge Devices

Personal Project

- Designed and developed an on-premises platform for deploying computer vision applications on edge devices.
- Implemented RTSP camera management and querying of stored detection data.
- Integrated computer vision, networking, databases, and web services into a scalable deployment architecture.

TECHNICAL SKILLS

Mechanical and Project Engineering:
Mechanical Engineering, Package Engineering, Equipment Specifications, Equipment Datasheets, Vendor Drawing Reviews, Technical Bid Evaluations, Equipment Selection, Industrial Projects, Multidisciplinary Coordination, Engineering Documentation, Project Execution.
Systems Completion and Commissioning:
Systems Completion, Systems Handover, Construction Turnover, Commissioning Coordination, Mechanical Completion, Handover Packages, Subsystem Test Packages, Notices of Energization.
Engineering and Project Platforms:
SmartPlant Foundation, Smart Completions, SharePoint, Power BI, Azure DevOps, Git.
Engineering and Design Software:
AutoCAD, SolidWorks, Autodesk Inventor, Microsoft Excel, Microsoft Project.
Industrial and Software Technologies:
Industrial Automation, Control Systems, Real-Time Data Systems, Edge Computing, C, C++, C#, Python, Go, JavaScript, TypeScript, SQL, Linux, Docker, Kubernetes.
Frameworks and Databases:
Flask, Django, Angular, PyTorch, CUDA, PostgreSQL, MongoDB, SQLite.
Frameworks and Databases:
Flask, Django, Angular, PyTorch, CUDA, PostgreSQL, MongoDB, SQLite.

EDUCATION

University of Toronto

Bachelor of Applied Science (BASc), Mechanical Engineering
Minor in Robotics and Mechatronics | Toronto, ON | 2020

- Hatch Engineering Entrance Scholarship — Full-Ride Scholarship Recipient.

ADDITIONAL TECHNICAL DEVELOPMENT

- **Harvard CS50:** Completed CS50x, CS50 Python, CS50 Web, and CS50 SQL.
- **edX:** Data Structures and Algorithms.
- **Boot.dev:** Programming curriculum covering software development and computer science fundamentals.
- **Nand2Tetris:** Computer architecture, machine language, assembly, compiler development, and operating-system construction.
